Education

Vellore Institute of Technology (VIT) <i>Master of Technology, Computer Science Engineering (Artificial Intelligence and Data Science)</i>	Expected May 2027 7.31
Motilal Nehru National Institute of Technology (NIT Allahabad) <i>Bachelor of Technology, Information Technology</i>	2024 7.16
Indian School Muscat <i>Class XII, CBSE Board, Science</i>	2020 92.8%
Indian School Muscat <i>Class X, CBSE Board</i>	2018 88.2%

Technical Skills

Languages & Querying: Python, SQL, C++
Data Analysis and Visualization: Pandas, NumPy, Tableau, Excel (Advanced — Pivot Tables, VLOOKUP, Dashboards)
Databases: MySQL, MongoDB (SQL & NoSQL)
Tools: Git & GitHub, Jupyter Notebook, Tableau, Excel

Projects

Fraud Detection in Ethereum <i>Python, XGBoost, Scikit-Learn, Pandas, Matplotlib</i>	Github
- Developed an XGBoost pipeline to detect fraudulent Ethereum accounts, achieving a 95% recall rate on imbalanced data. - Applied SHAP (Explainable AI) to decode "black-box" predictions, making model decisions fully transparent and auditable. - Mapped network-wide fraud trends by analyzing global feature importances, identifying total Ether received as a top risk metric. - Minimized false positives by optimizing Precision-Recall trade-offs to deliver highly reliable fraud alerts.	
Hybrid Stock Forecasting <i>Python, yfinance API, LSTM, GNN(GAT), FinBERT, Matplotlib</i>	Github
- Designed a multi-horizon forecasting system fusing LSTM and Graph Attention Networks (GAT) with cross-entity multi-head attention to model complex time-series and relational market dynamics.) - Formulated dynamic rolling-window correlation graphs to capture market contagion, and fused unstructured text data using FinBERT for sentiment-driven signals. - Reduced forecasting RMSE by 12% and achieved 62.4% directional accuracy, utilizing rigorous expanding-window walk-forward validation to strictly prevent data leakage.	
Enhancing Insurance Claim Predictions <i>Python, Pandas, Scikit-Learn, Keras, Predictive Modeling</i>	Github
- Built a machine learning pipeline to forecast insurance claims, comparing Deep Learning baselines with Ensemble methods.) - Cleaned 1,300+ records of tabular data using categorical encoding and numerical scaling in Python. - Assessed algorithm accuracy using core evaluation metrics (R², MSE, MPE) to identify the optimal model. - Improved risk assessment accuracy and model interpretability by leveraging tree-based regressions to capture non-linear relationships.	

Experience

Galfar Engineering And Contracting (SAOG) <i>Internship - Trainee</i>	May 2022 – June 2022 <i>Muscat, Oman</i>
- Optimized SQL queries, improving database performance by 10%. - Enhanced web application responsiveness by 12% through frontend and backend improvements. - Worked with ERP system for data handling, processing and debugging. - Collaborated with cross-functional teams to resolve system and infrastructure issues.	

Certified Courses

Advanced Artificial Intelligence and Machine Learning Applications <i>NIT, Warangal</i>	Certification
Completed 12+ hrs training on real-world applications using AI and ML.	
4.0 Tech Online Bootcamp <i>NxtWave</i>	Certification
Completed 4+ hrs training on AI, ML and Data Science.
